                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a creative group (II) (e.g. succinimidy) and maleimido groups) attached to reactive group (II) (e.g. succinimidy) and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

(I) are useful costeopathic activities, and is an angiogenesis inhibitor. (I) are useful for treating angiogenesis in a human, where the derivative is reacted with blood proteins. (I) are also useful for manufacturing a medicament composite of the in vivo half-life of a kringle 5 peptide in a patient to composite an anti-angiogenic effect. In particular, a modified kringle 5 peptide can be used for treating inflammatory disorders (e.g. immune and con-immune inflammation, chronic articular rheumatism or psoriasis), composite (e.g. diabetic retinopathy, neovascular glaucoma, restenosis, composite (e.g. diabetic retinopathy, neovascular glaucoma, restenosis, capillary proliferation in atherosclerotic plaques or osteoporosis), or concer associated disorders (e.g. solid tumours, solid tumour metastases, angiofibromas, retrolental fibroplasia, haemangiomas, composite tumour growth). The peptides are useful for treating these concers in mammalian or human patients. AAB35572 represents a mammalian kringle 5 protein, and AAB36563 to AAB35577 represent specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW19256 standard; Peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a modified anti-angiogenic peptide (I) comprising a reactive group that reacts with amino groups, hydroxyl groups on thiol groups on blood components to form stable covalent bonds. The reactive group is selected from succinimidyl or maleimido groups. (I) can have anti-inflammatory, vasotropic, cytostatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       claimed kringle 5 peptides from the present invention.

The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Plasminogen; human; kringle domain; endothelial cell proliferation; angiogenesis; antiproliferative; antiarteriosclerotic; cytostatic; antipsoriatic; antiinflammatory; antiulcer; antirheumatic; antiarthritic; antiangiogenic; cancer; tumour; autoimmune disease.
                                                                                                                                                                                                      The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             processes elsewhere in the vasculature. They are umethod of treatment of primary or secondary tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human plasminogen kringle 5 (Val454-Phe546).

                                                                                                                                                                                  The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber Stronger of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber osceritation of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber osceritation of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber osceritation of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber osceritation of the prophylaxis of various autoimmune diseases (e.g., haemangiomas, osler-Webber osceritation of the prophylax
                                         endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratt disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen w

CC the fragment. The kringle 5 peptides are inhibitors of angiogenesis and Cc endothelial cell proliferation and migration. The peptides are useful CC for treating angiogenic diseases, primary and metastatic solid tumours CC and carcinomas of various organs such as breast, genital tract, CC endocrine glands, skin, tumours of the brain and eyes and solid tumours CC arising from haematopoietic malignancies such as leukaemias and CC lymphomas. They are also used for the prophylaxis of various autoimmune CC diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases CC (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber CC syndrome), diseases caused by excessive or abnormal stimulation of CC endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases CC which have angiogenesis as a pathologic consequence (e.g., cat scratch CC disease and ulcers). The peptides are also useful as a birth control CC agent which inhibits ovulation and establishment of the placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human kringle 5 peptide fragment.
                       joints, wound granulation, ulcers etc., also as contraceptives that inhibit ovulation and establishment of the placenta. K5 antisera or (ant)sogonists can be used similarly, optionally coupled to cytotoxic agents. Antagonists may be used to induce angiogenesis, e.g. for wound healing. The K5 peptides are also used to raise specific antibodies (Ab), for diagnosis and for affinity purification of K5 receptors. The K5 receptors may then be expressed in tumour cells to increase their response to the peptides or used for identification of smaller antagonists. The Ab are used to detect/quantify the peptides in biological samples. The K5 peptides (and K5 fusion proteins) selectively inhibit proliferation of endothelial cells with low toxicity against
                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is a kringle 5 (K5) peptide homologous to human plasminogen. K5 peptide fragments homologous to this sequence, are anti-angiogenesis agents, specifically for treating or preventing cancer, particularly primary or metastatic solid tumours, carcinomas, sarcomas, lymphomas, haemangiomas. They can also be used for treating or preventing psoriasis, arthritis, macular degeneration and diabetic retinopathy. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New kringle 5 peptide(s) and fusion proteins derived from plasminogen - useful as anti-angiogenesis agents for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-MAY-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             against bovine capillary cells in vitro than kringle 1-4 peptides.
                                                                                                                                                                                                                peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber (e.g., haemangiomas, osler-Webber)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          angiogenesis; antiproliferative; antiarteriosclerotic; cytostatic; antipsoriatic; antiinflammatory; antiulcer; antirheumatic; antiarthritic; antiangiogenic; cancer; tumour; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Plasminogen; kringle 5 domain; endothelial cell proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB01890 standard; Protein; 101 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-MAY-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human plasminogen kringle 5, SEQ ID NO:34.
                                          syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01890-B01894 represent, respectively, human, murine, Rhesu monkey, bovine and porcine plasminogen kringle 5 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Davidson DJ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                         (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

Note: This sequence is not shown in the specification, but is derived from the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of anglogenesis and endothelial cell proliferation and migration. The peptides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from because the control of the brain and eyes and solid tumours arising from because the control of the brain and eyes and solid tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 17; Page -; 48pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      incubation and isolation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2000-349573/30.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-MAY-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                       endothelial cell proliferation and migration. The peptides are useful for treating anglogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber Syndrome), diseases caused by operations (e.g., haemangiomas, Osler-Webber Syndrome), diseases caused by operations
                                                                                                             which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen used
                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating
                                                                                                                                                                                           Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), disease
                                                                                                                                                                                                                                                                                                                                                                                         the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by
                                                                                                    in an exemplification of the invention

                                                                                                                                                                                                                                                                                                                    The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoletic malignancies such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber (e.g., haemangiomas), osler-Weber (e.g., haemangiomas), osler-Weber (e.g., haemangiomas), osler-Weber (e.g., haemangiomas), osler-Weber (e.g., haem

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAB01918 standard;
                                                                                                                              Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-MAY-1996;

                                                                endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoletic malignancles such as leukaemias and lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, osler Webber Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB01919 standard; Protein; 192 AA
                                                                                                                                                                                                                                                                                                     peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by incubation and isolation -

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for the polypeptides are useful for the determining the presence of or predisposition to a disease associated to with altered levels of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antagonists) that bind to them. Cells to the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or the nucleic acids encoding the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically cengineered to express them are also useful for producing the proteins. They may be used to therapy, and can be used as nutritional supplements. They may be used to concrease stem cell proliferation; to regulate haematopoiesis; and in treatment of leukaemias. ANU29510-ANU33304 represent the amino acid cequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 18

                                                                                                                                                                                                                                                                                                          for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used tincrease stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated cwith altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells can be compared to the proteins are useful for identifying a therapeutic agent compressing the proteins are useful for identifying a therapeutic agent compression or physiological interactions of the polypeptide. Vectors comprising compineered to express them are also useful for producing the proteins. Compineered to express them are also useful for producing the proteins. Compineered to express them are also useful for producing the proteins. Compineered to express them are also useful for producing the proteins. Compineered to express them are also useful for producing the proteins. Compineered to express them are also useful for producing the proteins. Compineered to express them are also useful for producing the proteins. Compineered to expression and/or nearesticing to regulate haematopoiesis; and in the cartilage, tendon and/or stimulation; as anti-inflammatory agents; and compineered to the compineered to the proteins. Compineered to the proteins and compineered to the proteins of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The KED polypeptide, kringle proteins, or a kringle derived from human tissue plasminogen activator (tPA) protein are used to inhibit angiogenesis. Kringle protein, KED or tPA are useful for treating tumours, as well as atherosclerosis, arthritis, retinopathy and other similar diseases. KED is also useful for the treatment of diseases such as bronchial vascular congestion, inflammatory bowel disease, adult respiratory distress syndrome, castleman's disease, psoriasis, hepatitis, aneurysm, renal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of kringle protein and kringle derived from plasminogen and composition comprising kringle proteins for treating tumor and

This hybrid plasminogen/u-PA sequence is described in the specification although the sequence itself is not given.
                                                                 Hybrid plasminogen activators for treating thrombotic disease comprise Kringle 5 or Kringles 4 and 5 of plasminogen linked B-chain of t-PA or u-PA via aminoacid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This hybrid plasminogen/t-PA sequence is described in the specification although the sequence itself is not given. The sequence given here has been compiled using the human plasminogen sequence from Patent No. WO9013640 and the t-PA sequence of DE3930099. The variant 4-anisoyl [SYQ]-[plasminogen 443-541]-[t-PA 262-527] is also specifically claimed. The hybrid fibrinolytic enzymes are useful in the treatment of thrombotic diseases.                                                  Sequence
                                                                                        sequence given here has been compiled using the human plasminogen sequence from Patent No. WO9013640 and the human u-PA sequence from the SWISSPROT database (UROKSHUMAN). The hybrid fibrinolytic enzymes are useful in the treatment of thrombotic diseases.
                                                                                                                                                                                                                           Hybrid plasminogen activators for treating thrombotic diseases comprise Kringle 5 or Kringles 4 and 5 of plasminogen linked to B-chain of t-PA or u-PA via aminoacid sequence
                                                                             See also R22499, R22502 and R22504.
                                                                                                                                                This hybrid plasminogen/u-PA sequence is described in the specification although the sequence itself is not given. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence given here has been compiled using the human plasminogen sequence from Patent No. W09013640 and the t-PA sequence of DE3930099 A N. P.Dimethyl -4-aminobenzoyl two-chain [SYQ]-[plasminogen 347-541]-[t-PA 262-527] and the 4-anisoyl version of this variant are also specifically claimed. The hybrid fibrinolytic enzymes are useful in the treatment of thrombotic diseases. See also AAR22502-4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                       anti-anglogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor.

                                                                                                                                                                                                                                                                                                                                                                                  cDNA encoding kringle domains 1 and 4 of human plasminogen (full sequence given in AAR60519) was PCR amplified using primers given in AAQ71268-71. Amplified cDNA was linked to a sequence encoding the Factor-Xa cleavage site (given in AAR60503), subcloned in vector pLCIIMLCH6 so that it was linked to a hexahistidine-encoding sequence and expressed in E. coli QX13. The fusion protein was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a modified anti-angiogenic peptide (I) CC comprising a reactive group that reacts with amino groups, hydroxyl CC groups or thiol groups on blood components to form stable covalent CC bonds. The reactive group is selected from succinimidyl or maleimido groups. (I) can have anti-inflammatory, vasotropic, cytostatic, CC antirheumatic, antipsoriatic, antidabetic, antiarteriosclerotic and CC extendating angiogenesis in a human, where the derivative is reacted CC for treating angiogenesis in a human, where the derivative is reacted CC with blood proteins. (I) are also useful for manufacturing a medicament CC extending the in vivo half-life of a kringle 5 peptide in a patient to CC provide an anti-angiogenic effect. In particular, a modified kringle 5 copide can be used for treating inflammatory disorders (e.g. immune and con immune inflammation, chronic articular rheumatism or psoriasis), CC vessels (e.g. diabetic retinopathy, neovascular glaucoma, restenosis, constitution of the control of the contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                      Ş
                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                      The invention relates to a method of preparing plasminogen kringle 5 CC peptide fragments. The method comprises mixing mammalian plasminogen and CC elastase in the ratio 1:100-1:300, followed by incubating and isolating CC the fragment. The kringle 5 peptides are inhibitors of angiogenesis and CC endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and CC carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising CC from haematopoietic malignancies such as leukaemias and lymphomas. They CC are also used for the prophylaxis of various autoimmune diseases (e.g., bearing CC from haematopoietic malignancies such as leukaemias and lymphomas. They CC are also used for the prophylaxis of various autoimmune diseases (e.g., bearing), CC diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Crohn's disease, atheroscienosis), diseases which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and conhibits ovulation and establishment of the placenta. The present

protease zymogen in the extracellular fluids of vertebrates. Its calculated the proteolysis ascive form, plasmin, is implicated in pericellular proteolysis cassociated with a wide range of physiological and pathological corporesses. Plasminogen expression is regulated by plasminogen activators which hydrolyse a peptide bond in plasminogen to convert it to plasmin corporate to referre the plasmin. Review of sequence homologies of several convert it to plasmin. Review of sequence homologies of several plasminogen activators and chymotrypsin has identified a six amino acid peptide involved in plasminogen activation. This peptide is particularly useful when inserted between amino acid residues 644 and 645 of full length human plasminogen. Novel plasminogen activators have been made cased upon the plasminogen Novel plasminogen activators have been made based upon the plasminogen activation/recognition site of plasminogen binding proteins. The polypeptides are useful in preparing thrombolytic agents for treating blood clotting disorders such as heart attack.
                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                streptokinase where at least one nonessential portion has been modified. The invention also describes a method of forming a thrombolytic agent comprising determining a nonessential portion to render the resulting protein less antigenic. The modified streptokinase is used to treat blood clot disorders, such as heart attacks. The modified streptokinase has less antigenicity than streptokinase but is still able to complex plasminogen and lead to plasminogen activation. Modified streptokinase with the monessential portions removed or truncated simplify the molecule. Such smaller proteins are cheaper and easier to produce. This sequence represents a fragment of the human plasminogen protein which is used in the description of the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Plasminogen; human; thrombolytic agent; streptokinase; antigenic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               donor, or culturing cells capable of producing plasminogen activator in conditioned culture medium (CCM) and contacting the CCM with plasminogen. Angiostatin produced by method of the invention is useful for treating animals with angiogenesis diseases. It is useful for treating an angiogenic disease such as neoplastic diseases (e.g. tumours and tumour metastasis), benign tumours (e.g. hemangiomas, acoustic neuromas, etc), connective tissue disorders (e.g. rheumatoid arthritis and atherosclerosis), ocular angiogenic diseases (e.g. diabetic retinopathy, corneal graft rejection, etc), cardiovascular diseases, cerebral vascular diseases, diabetes-associated diseases and immune disorders (e.g. chronic inflammation and autoimmunity). One and two chain variants, Lys/8 and Glul variants and mixt. of these are included.

The PA is used on compsns. to treat thrombotic diseases, in partic. myocardial infarction. Dosage is 0.1-10 (pref. 0.1-2.0) mg/kg by injection for up to 5 doses, or by infusion.
                                                                                                                                                                                                                                                       Domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           acid except Lys. Here the amino acids is substituted by early cosition 561 is the critical cleavage site in the conversion of plasminogen to plasmin. The resulting product is proteolytic resistant plasminogen which may be used to treat thrombosis in humans. When complexed with streptokinase, it does not degrade into humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The amino acid at position 475 is Val for the vector pUC119PN127.6, whereas Fig 1 of the specification reflecting the sequence encoding native human plasminogen, contains Ala. The amino acid at 561 of the wild type plasminogen (Arg), is substituted by any amino acid except Lys. Here the amino acids is substituted by 61y.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Fig 1(A-P); 82pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                561 of the wild-type plasminogen (Arg), is substituted by any amino acid except Lys. Here the amino acids is substituted by Glu. Position 561 is the critical cleavage site in the conversion of plasminogen to plasmin. The resulting product is proteolytic resistant plasminogen which may be used to treat thrombosis in humans. When complexed with streptokinase, it does not degrade into humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 1991-193201/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The amino acid at position 475 is Val for the vector pucl19PN127.6, whereas Fig 1 of the specification reflecting the sequence encoding native human plasminogen, contains Ala. The amino acid at 561 of the wild-type plasminogen (Arg), is substituted by any amino acid except Lys. Here the amino acids is substituted by ser. Position 561 is the critical cleavage site in the conversion of plasminogen to plasmin. The resulting product is proteclytic resistant plasminogen which may be used to treat thrombosis in humans. When complexed with streptokinase, it does not degrade into plasmin and it caused rapid plasminogen activator activity.
                                                                                                                             Domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Position 561 is the critical cleavage site in the conversion of plasminogen to plasmin. The resulting product is proteolytic resistant plasminogen which may be used to treat thrombosis in humans. When complexed with streptokinase, it does not degrade

                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                  A lambda phage clone comprising a cDNA sequence encoding plasminogen was obtained from Dr. Mark Martsen at the University of Washington. The cDNA was isolated from a human liver library by probing with the partial sequence of Malinowski et al. The sequence of the complete cDNA and the encoded amino acid sequence are shown in AAQ40319 and AAR34428.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This protein is a plasminogen mutant cleavable by thrombin. Activation is localised to the thrombus because cleavage to is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human tissue plasminogen activator single chain form fibrinolytic agent - comprises thrombin cleavable zymogen stimulating amido lytic activity, for lysing clots in heart attack and stroke victims and suppressing fibrin matrix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                    This is the protein plasminogen. The encoding cDNA is used in a new process for the production of plasminogen where a first DNA sequence encoding plasminogen and at least one additional DNA sequence encoding a protein that processes or stabilises the plasminogen is introduced into a eukaryotic host cell. The protein is selected from alpha-1-antitrypsin (AAT) and its variants and Argserpins. Both the DNA sequences are operably linked to transcriptional promoter and terminator sequences. The host cell is cultured under conditions that allow the DNA sequences to be expressed and the recombinant plasminogen is isolated from the host cell. Co-expression of plasminogen and the protein gives increased yields of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       04-DEC-1989;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                            angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel viral gene therapy vector comprising nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine angiostatin, human or murine endostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector
                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Fig 5; 83pp; English.

                                                                                                                   AAY82690 standard;
                                                                                                                                                                                                                                                                                                                                            of these properties. The proteins can be used for treating an angiogenic mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatcoma, sarcoma and lymphoma) in a patient and for inhibiting tumor growth. The present sequence is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 combinations of angiostatin, endostatin, interferon, thrombospondin, interferon inducible protein and platelet factor 4, and have anti-angiogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination
                                                                                                                                                                                                                                                                                                                 Sequence

Angiostatin contains the kringle 1-4 region of plasminogen, and greenstatin contains the kringle 1-4 region of plasminogen, and greenstatin contains contains the kringle 1-3 region of plasminogen. As both proteins contain a high cumber of disulphide bonds, they are difficult to purify. The specification describes a method for the purification of such angiogenesis inhibitory proteins. The method comprises solubilising capacitation of the proteins, produced as inclusion bodies in Escherichia coli and crefolding the solubilised fraction in buffer containing urea and containing urea and containing containing urea and continued that of the proteins are used to suppress inhibitory proteins specifically inhibitory proteins are used to suppress angiogenesis, specifically for treating concerns (e.g. dishetic retinogaths) but also arthritic and accidents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This protein is a plasminogen mutant cleavable by Factor Xa. Activation is localised to the thrombus because cleavage to is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosis, etc.

                                                                                                                                                                                                                       Activatable fibrinolytic and antithrombic proteins e.g. factor \mathbf{Xa}, thrombin or activated protein \mathbf{C}
                                                                                           Sequence
                                                                                                                             comprising the mutant plasminogen are used for treatment prevention of thrombosis, etc.
                                                                                                                                                   This protein is a plasminogen mutant cleavable by thrombin. Activation is localised to the thrombus because cleavage to is by an enzyme of the blood clotting pathway. Compositions
